

JOURNAL PROSPECTUS

Vision

CCS Archive is an open access peer reviewed computer science journal with motivation to advance science by publishing high-quality research that represents the multifaceted global scientific community and offers great possibilities to our authors.

Journal Objective

The primary objective of CCS ARCHIVE journal is to publish cutting-edge research papers with crucial interdisciplinary flavor of the field by including articles that address the key topics from the differing perspectives of computer science.

The journal is focused to provide a high-quality, affordable open access option that best serves the publishing and dissemination needs of international researchers. CCS ARCHIVE will encompass a broad range of computer science areas and will publish technically sound research that demonstrates a contribution to advancing knowledge.

Journal Content

The Circulation in Computer Science (CCS Archive) aims to be the major resource for computer science research, covering both methodology and practice. This journal will primarily feature research articles, and will also include review articles, communications, and survey papers.

The journal has three main themes:

- **New Concepts and Approaches** for papers based upon a problem of real substantive interest with appropriate data.
- **Practical Applications** for papers on interesting practical problems which are addressed using an existing or a novel adaptation of an existing technique.
- **Tutorials & Reviews** with papers on recent and cutting edge topics in computer science.

CCS ARCHIVE will appeal to researchers studying in a variety of computer fields looking to publish and read extensive scientific research.

Journal Format

CCS ARCHIVE is an online journal with continuous publication of articles on an advanced hosting platform, with content available in full-text HTML and PDF formats to improve discoverability. Article content will be sharable through email and social media tools. Content will be indexed in a number of reputed databases.

Editorial and Peer-Review Structure

The Editorial Team is composed of international experts. Contributions to CCS ARCHIVE will undergo rigorous peer review process.

Professional Community

Fostering a community of individuals, research institutes, and scientific research associations is an essential component of the mandate of this open access journal. Community partnerships help to connect researchers publishing in the journal with their target audiences and this relationship-building will help to drive the overall awareness and success of the journal. Possible partnerships could include research institutes, organizations, or agencies operated by universities, governments, and independent scientific societies.

Business Approach

The operational costs of publishing CCS ARCHIVE will be funded by an article processing charge (APC). APC covers the entire cost of the publication process

including peer-reviewing, editing, publishing, maintaining & archiving, and allows immediate access to the full text versions of the research articles. *Discounts for authors working in developing countries:* Where available these are offered automatically upon submission.

Journal Values

CCS ARCHIVE is based on three pillars: Community, Choice, and Quality. The *CSL Press* believes that a healthy scientific publishing community results in better submissions, better publications, and ultimately better science. The ARCHIVE provides choice by publishing a broad range of article types, which results in a greater diversity of published research and ultimately improved dissemination of critical research. CCS ARCHIVE models itself on the principle of high quality scientific publishing with an international reach and a reputation for excellence. For authors who want to make their research available to the widest network of readers, and for editors who want to contribute to the development of the highest quality research publication, CCS ARCHIVE is the best option.
